

# JONAH ODOH

Senior Software Engineer — Backend | Full Stack | DevOps

jonahodoh@gmail.com | +2348163721459 | [LinkedIn](#) | [Portfolio](#)

---

## SUMMARY

Senior Software Engineer with 6+ years of experience designing and delivering high-availability distributed systems across fintech and healthcare domains. Deep expertise in Java, Python, Node.js, and TypeScript, with a strong track record of building scalable backend microservices, optimising system performance and reliability, and driving end-to-end delivery across the full software development lifecycle. Experienced in cloud-native engineering on AWS and GCP, container orchestration with Docker and Kubernetes, CI/CD automation, and production observability. Adept at contributing to system design and architecture decisions, writing clean maintainable code, mentoring engineers, and improving availability, efficiency, and operational excellence at scale.

## WORK EXPERIENCE

### Senior Platform Engineer

**Bespoke Labs** — California, United States

02/2026 – Present

- Design and build distributed Kubernetes-based infrastructure for large-scale LLM benchmarking, workflow orchestration, and AI platform reliability testing across high-throughput engineering environments.
- Architect and improve backend automation, CI/CD pipelines, and observability tooling (Prometheus, Grafana), reducing environment drift, improving deployment consistency, and strengthening system stability across evaluation pipelines.
- Collaborate with AI researchers and platform engineers to design scalable solutions for workload isolation, distributed execution, and rollout analysis — driving reliability and operational efficiency at scale.
- Act as a technical point of contact for infrastructure debugging and incident resolution, applying on-call practices and systematic root cause analysis to maintain platform health and minimise downtime.

### Senior Software Engineer

**Andela** — New York, United States

02/2025 – Present

- Deliver high-quality backend and full-stack engineering solutions for global client engagements across platforms supporting 10k+ active users, covering all phases of the software development lifecycle — design, implementation, testing, deployment, and production support.
- Design and build scalable backend services and REST APIs, reducing average request latency by 25% and increasing system throughput across critical workflows through targeted code optimisation and architectural refactoring.
- Contribute to system design, technical documentation, and cross-team code reviews, improving code maintainability, deployment reliability in cloud environments, and cutting production incidents by ~30%.
- Collaborate with cross-functional teams to translate business requirements into robust technical solutions and clear design documents, accelerating feature delivery cycles by 15–20% while reducing integration issues.

### Software Engineer

**Stax** — **Karabo Fintech Platform** — Lagos, Nigeria

02/2022 – 10/2025

- Designed and implemented scalable backend microservices enabling secure, reliable processing of 100k+ monthly financial transactions with under 200ms average response time across distributed components.
- Built a double-entry wallet and ledger system using Spring Boot and PostgreSQL — implementing ACID-compliant transaction handling for wallet top-ups, debits, credits, and inter-wallet transfers, with optimistic locking to prevent concurrent balance inconsistencies.
- Engineered a dynamic payment routing engine that selects optimal providers based on transaction type, amount thresholds, real-time provider health, and cost efficiency — cutting payment processing latency by 30%.
- Implemented circuit breakers and fallback mechanisms using Resilience4j, achieving 99.9% payment success rate and 99.9% system uptime through proactive reliability and fault-tolerance engineering.
- Developed automated reconciliation jobs to continuously detect and flag ledger discrepancies, improving financial auditability and reducing manual oversight overhead.
- Integrated third-party financial APIs (payments, KYC, compliance) with robust authentication and encryption, ensuring adherence to fintech regulatory and security standards.
- Built React-based internal dashboards for real-time transaction monitoring and wallet management, giving operations teams live visibility into payment flows and system health.

## Software Engineer

**Reliance Health** — Lagos, Nigeria

01/2019 – 01/2022

- Designed and maintained scalable APIs and microservices powering core healthcare features — telemedicine consultations, EHR, patient management, and prescription services — across a platform serving 50k+ active patients.
- Implemented server-side business logic across critical healthcare workflows, reducing consultation scheduling errors by 25% through precise validation, error handling, and iterative optimisation.
- Built secure integrations with payment gateways, insurance claims systems, and third-party healthcare providers, streamlining claims processing and cutting reimbursement delays by 30%.
- Engineered HIPAA-compliant data flows across relational and NoSQL databases with secure authentication, ensuring reliable and legally compliant handling of sensitive patient information.
- Developed monitoring and analytics pipelines to track patient engagement and service usage, enabling data-driven platform improvements that boosted reliability to 99.9% uptime.
- Collaborated with doctors, product managers, and QA engineers across the full development lifecycle to deliver health-tech features supporting Reliance Health's growth across Africa.

## TECHNICAL SKILLS

---

**Languages:** Java, Python, JavaScript, TypeScript, SQL

**Frameworks & Libraries:** Spring Boot, Node.js, NestJS, React, Next.js, Flask, Django, Resilience4j

**Backend & Architecture:** Distributed Systems, Microservices, REST API Design, Event-Driven Architecture, Clean Architecture, ACID Transactions, System Design

**Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, Terraform, Ansible, CI/CD Pipelines, Prometheus, Grafana, Observability

**Databases:** PostgreSQL, MySQL, MongoDB, Redis

**Security & Compliance:** HIPAA, Fintech Regulatory Standards, OAuth 2.0, JWT, Encryption, API Security

**Testing & Quality:** TDD, Unit Testing, Integration Testing, System Testing, Code Review, Incident Response

## EDUCATION

---

**B.Sc. Economics** — University of Lagos (2016 – 2021)

**Diploma, Software Engineering** — Semicolon Africa (2019 – 2020)

**Business Education & Entrepreneurial Development** — Henley Business School (2020)
